10. Can `reverse()` be directly used on strings in JavaScript?
11. What is the difference between `charAt()` and accessing string using index?
12. What does the `concat()` method do?
13. Difference between `toUpperCase()` and `toLowerCase()`?
14. What is the use of the `search()` method?
15. Difference between `slice()`, `substring()`, and `substr()`?
16. What is the purpose of `map()` method?
17. Difference between `map()` and `forEach()`?
18. What does the `filter()` method do?
19. Difference between `find()` and `filter()`?
20. What is the use of `reduce()` method?
21. What does the `some()` method do?
22. Difference between `some()` and `every()`?
23. What is the purpose of `push()` method?
24. Difference between `push()` and `unshift()`?
25. Difference between `pop()` and `shift()`?
26. What does the `splice()` method do?

27. Difference between slice() and splice()?
28. What is the use of join() method?
29. Difference between concat() and spread operator (...) ?
30. What does the sort() method do?
31. How do you sort numbers correctly in JavaScript?
32. What is the use of reverse() method?
33. How do you remove duplicate values from an array?
34. What is the use of includes() in arrays?
35. Difference between indexOf() and findIndex()?
36. What is array destructuring?
37. What is the spread operator in arrays?
38. What is the rest parameter?
39. What is the use of Object.keys()?
40. Difference between Object.keys() and Object.values()?
41. What does Object.entries() return?
42. What is the use of hasOwnProperty()?
43. Difference between shallow copy and deep copy?
44. What is object destructuring?
45. Difference between dot notation and bracket notation?
46. What is the use of optional chaining (?.)?
47. What is nullish coalescing operator (??)?
48. Difference between function declaration and function expression?
49. What is an arrow function?
50. Difference between normal function and arrow function?
